

Mars Alexis D. Regidor

GIS Specialist/Analyst

regidor.marsalexis@gmail.com | +63 945-618-3043 | Muntinlupa City, Philippines | bruskomars.github.io
linkedin.com/in/marsregidor

PROFILE

GIS Specialist with expertise in geospatial data management, spatial analysis, and GIS database administration. Experienced in maintaining enterprise geographic datasets, performing QA/QC, and managing spatial databases using PostgreSQL/PostGIS, SQL, Python, and QGIS. Passionate about leveraging GIS technology to improve data quality, support decision-making, and deliver reliable location-based solutions.

EDUCATION

Bachelor of Science in Forest Science Major in Geographic Information System, University of the Philippines, Los Baños 2006 – 2011 | Los Baños, Laguna, Philippines

PROFESSIONAL EXPERIENCE

Accu-map, Inc., GIS Specialist / Team Lead 2016 – present | Mandaluyong City, Philippines

- Analyzed large geospatial and tabular datasets using **SQL** and **Python**, generating insights that informed strategic and operational decisions.
- Automated data validation and geospatial workflows using **Python**, improving efficiency by 20%.
- Developed and maintained GIS databases, ensuring data accuracy, consistency, and integrity.
- Collaborated with cross-functional teams to integrate GIS solutions into business processes.
- Improved data infrastructure by optimizing **spatial databases** and developing **automated data pipelines**, ensuring consistency and scalability.

Precision Design Solutions, GIS Technician 09/2025 – 03/2026 | USA

- Reviews and interprets data sources and uses basic GIS software functions to enter, edit, and update GIS spatial and attribute data into databases or layers, following standard procedures
- Interprets and transforms external data to fit internal database formatting and requirements.
- Defines GIS product needs per request, works with supervisor or requestor to ensure compliance with identified needs.
- Maintain GIS databases and metadata to ensure data accuracy, completeness, and accessibility.
- Develops and maintains links between various databases.
- Participate in quality assurance and quality control activities to ensure accuracy, completeness, and consistency of GIS data and deliverables.

Asiatype, Inc., GIS Specialist/Analyst 2011 – 2016 | Mandaluyong City, Philippines

- Analyzed spatial and tabular datasets using **GIS tools** and **SQL**, supporting data-driven decision-making across projects.
- Designed and developed interactive digital maps and data visualizations by integrating multiple datasets.
- Performed **quality assurance checks** to ensure accuracy, consistency, and integrity of GIS and tabular data.
- Extracted, transformed, and analyzed large datasets using **Python** and **mapping software** to identify trends and support reporting needs.

TECHNICAL SKILLS

Data Analysis & Reporting - Python (Pandas, Numpy, Matplotlib, Seaborn) - SQL (SQLite, MySQL, ArcGIS DB) - Microsoft Excel (Pivot Tables, Power Query, Dashboards, Formulas) - Power BI, Tableau	Data Management & Processing - ETL (Extract, Transform, Load) - Data Cleaning, Validation, and Transformation - Database Design, Optimization, and Querying (PostgreSQL) - Data Workflow Automation (Python Scripting)	GIS & Geospatial Analytics - ArcGIS, QGIS, PyQGIS, ArcPy, PostGIS - Spatial Data Processing & Analysis - Map Design, Visualization, and Reporting - Spatial Modeling & Geostatistical Analysis	Programming & Automation - Python (Web Scraping, Automation Scripts) - Basic HTML, CSS, JavaScript - Flask / Django / FastAPI
---	---	---	--

CERTIFICATIONS

- Python Programming: 100 Days of Code & Deep Dive Series 🔗 - Python for Data Science & Machine Learning Bootcamp 🔗	- ArcGIS Mega Course: Basic to Advanced GIS, RS & Python 🔗 - The Ultimate MySQL Bootcamp: SQL Beginner to Expert 🔗	- Introduction to web programming for GIS applications 🔗 - Leaflet From Scratch With A GeoDjango Project 🔗	- Data Analysis with Python & Excel – Udemy - SQL for Data Analysis 🔗
---	--	--	---

PROJECTS

ArcGIS Database Management, Optimization & Data Cleaning

- Designed and optimized spatial and relational databases using SQL and ArcGIS.
- Performed data cleaning and preprocessing with Python to improve data quality, retrieval speed, and support efficient analysis across multiple projects.

Google Project: Data Collection, Validation & Analysis

- Led a team of 20 surveyors/operators to collect on-ground business data (e.g., store locations, contact details, operational status), ensuring standardized data capture through well-designed survey templates.
- Verified and geocoded business locations using GPS coordinates, resolving discrepancies between registered addresses and actual map locations on Google Maps.
- Supervised data verification via calls, revisits, and Google Places API, enhancing data accuracy and reliability.
- Implemented automated validation checks, including duplicate detection and outlier removal, improving data quality and workflow efficiency.
- Cleaned, structured, and integrated data into CRM/database systems, enabling seamless access for reporting and analysis.

Comparative Analysis of Google Maps, OpenStreetMap, and Internal GIS Data

- Conducted comparative data analysis to evaluate the accuracy, completeness, and consistency of datasets from Google Maps, OpenStreetMap (OSM), and internal GIS data.
- Defined key performance indicators (KPIs) to measure differences in road networks, points of interest (POIs), geographic coverage, and data freshness.

Land Use Map Digitization Project

- Digitized land use features from PDF-based maps by first georeferencing source files to the correct coordinate system.
- Interpreted map legends and symbology to accurately classify land use categories.
- Converted mapped features into clean, well-structured GIS layers (polygons) with standardized attributes.
- Performed QA/QC checks to ensure spatial accuracy, correct classification, and alignment with reference data.

KEY STRENGTHS

- **Analytical & Problem-Solving Skills** – Skilled in identifying trends, resolving data issues, and generating actionable insights from complex datasets.
- **Detail-Oriented** – Ensures high data quality through careful validation, cleaning, and documentation across all stages of analysis.
- **Adaptable & Quick Learner** – Proficient in rapidly learning new data tools, programming languages, and analytical techniques.
- **Collaborative & Leadership Experience** – Strong background in leading teams and working cross-functionally on data-driven projects.
- **Clear Communicator** – Able to translate technical data findings into clear reports, dashboards, and presentations for stakeholders.
- **Self-Motivated & Results-Driven** – Proactively takes ownership of tasks and consistently meets project goals and deadlines.
